

SPARK GREEN OFFSET PROGRAM

Our SPARK Green Offset Program is the first of its kind in Alberta.

Through this unique program, individuals and businesses have the opportunity to purchase locally generated Green Energy Offsets from solar, wind, or other renewable energy generators in Alberta. Our program cuts through red tape and regulatory barriers, enabling consumers to freely support renewable energy generators of their choice.

We Have Directed
More Than
\$70,000
To Over 140
Alberta
Microgenerators

HOW DOES IT WORK?

Solar and wind small-scale micro-generators in Alberta generate excess energy that is exported into Alberta's electrical grid.

By signing up as a SPARK Certified Green Generator with ACE, micro-generators are able to sell their wholly owned renewable energy attributes of their exported energy as Green Energy Offsets to our customers.

ACE customers can choose to "green" some or all of their electricity consumption by purchasing Green Energy Offsets from our SPARK Certified Green Generators such as a local wind turbine or a specific group of solar small-scale micro-generators that are located in their neighbourhood or community.

When Green Energy Offsets are purchased by our customers, ACE ensures that their financial support goes directly to the SPARK Certified Green Generators through an open and auditable process.

In addition to receiving the existing Alberta microgeneration credit, SPARK Certified Green Generators receive up to 1.85 cents/kWh for their Green Energy Offsets.

CHOOSE YOUR LEVEL OF SUPPORT

When signing up for an ACE energy plan, you can choose the percentage of power usage that you would like to green!

100% = \$0.020 / kWh
75% = \$0.015 / kWh
50% = \$0.010 / kWh
25% = \$0.005 / kWh
